

REACH (EC No. 1907/2006)

Date: 2022-01-18

Declaration on the compliance of REACH Regulation

MENNEKES Elektrotechnik GmbH & Co. KG and all above-mentioned companies market products containing copper and copper alloys.

These are products within the meaning of the REACH Regulation.

According to the REACH Regulation, MENNEKES is a "downstream user" of substances contained in products.

Components of our products include alloys containing lead (lead content > 0.1% w/w) which in turn contains the following substance, which is identified as SVHC, in concentrations higher than 0.1% (w/w):

Substance	CAS/EINECS	List	Date of recording	Remark
Lead	CAS: 7439-92-1 EINECS: 231-100-4	SVHC	27.06.2018	The inclusion of lead as SVHC in the Candidate List results in the corresponding reporting requirements in the supply chain.

Our packaging does not contain any of the (SVHC) substances listed in the Candidate List as amended in concentrations higher than 0.1% (w/w).

The current Candidate List can be found here: <https://echa.europa.eu/candidate-list-table>

Items made of copper and copper alloys are not substances or preparations as referred in CLP/GHS and do not require labelling or classification.

According to Section 31 of the REACH the preparation of a REACH safety data sheet (SDS) for products is not required. Information on regulatory requirements as well as information on safe handling has been prepared by MENNEKES in an "Information Sheet for Products" voluntarily.

Please send your inquiry to your contact at the MENNEKES Sales department or to the following e-mail address: REACH@MENNEKES.de

Comprehensive information on REACH can be found at the following link on the ECHA homepage:

<https://echa.europa.eu/de/regulations/reach/understanding-reach>

Irrespective of the REACH Regulation, according to the RoHS - 2011/65/EU Directive, lead is permissible in copper alloys in a mass percentage of up to 4%. Of course our products meet this requirement.
